Go Groundwater App & Dongle

The Go Groundwater App and Dongle allows users to wirelessly measure water levels by configuring Divers with a smartphone. Installing the Bluetooth dongle in a monitoring well saves time as users no longer need to go through the time-consuming process of opening locked monitoring wells.

Data can be stored and sent from a smartphone allowing users to view diver readings in graphs and tables. Data can then be sent via email and can include manual measurements as well as cable length calculations and pictures etc.

Applications

- Automatic groundwater monitoring

Features

- Compact & easy to install
- Configure via Bluetooth
- User friendly interface
- Set interval readings – minutes or hours
- Set start, future start and stop status
- Works in offline mode
- Time & cost saving
