

MGS Loop Weights can also be supplied with weight distribution plates. Not only do the plates help with ease of attachment of the weight to the MGS Thermo-Loop® but they enable extra weights to be safely added to the Thermo-Loop® when additional weight is needed for deeper or difficult installations. The plates are available to suit 40mm, 45mm & 50mm Thermo-Loops.

## Applications

- Geothermal Loop installations

## Features

- Made from mild steel
- Slimline design

Loop Weights are used to aid the installation of Thermo-Loops® in deep boreholes, difficult ground conditions, tight boreholes or where the viscosity of the borehole fluid means that the loop will not fall under its own weight. Their slim design with a conical toe to ensures smooth and easy installation of the Thermo-Loops®. They can also be bolted together for additional weight if required. Manufactured from mild steel with an outside diameter of 80mm, length 1100mm and weighing 40kg.
