

Upright steel security covers offer water resistant security and are particularly useful where easy location of the borehole is required, such as a field or where vegetation is likely to obscure the borehole location.

Manufactured in heavy duty steel with a corrosion resistant coating, they are fitted with a simple 360 degrees swivel lid and secured with a heavy-duty padlock. Designed to be set into concrete the external lugs near the base provide a key into the concrete and prevent unauthorised removal.

Other colours are available on request.

Applications

- Ground water monitoring wells
- Gas monitoring wells
- Water Wells

Features

- Water resistant
- Heavy duty
- Keyed alike padlock
- Lockable
- High Visibility
- Range of colours available
