

Type DCS Manifold Chambers are bespoke designed & manufactured to suit individual designer and project requirements and are typically used in large geothermal projects.

Fabricated from polyethylene, DCS distribution chambers can accommodate different manifold designs including options for manifold size, flow meters, flow control valves, number and size of inlets and outlets and fill and bleed ports.

They are available in sizes 2m x 1m and 3m x 1m and are fitted with two 610mm circular open aperture manholes and covers which are rated for passenger vehicles with a maximum wheel load of 600kg for areas such as driveways and car parks.

## Applications

- Large geothermal projects

## Features

- Made from polyethylene
- Rated to 600kg (ISO 15398)
- Bespoke project design
- Water resistant
